

Asphalt Coating Defends Wood Ties Against Weathering

The Problem

Water and the sun's UV rays accelerate the destruction of wood ties. Keeping up with tie replacements is a continual and costly battle.

The Solution

Tietan provides enhanced protection to rail ties, bridge ties and switch ties against the damaging effects of UV and water.

Wood Ties Have a Defender

How does it work?

Tietan™ is an engineered, weather-resistant asphalt coating designed to protect and extend the life cycle of wood ties.

Tietan is applied hot to the top surface of a treated tie. Prior to cooling, it seeps into existing cracks, checks and splits, forming an elastic, unbreakable barrier to water and UV rays.
